

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Original): A method for designing an optical pulse shaper including a first optical propagation line unit having a nonlinear medium and a dispersion medium concatenated, comprising:

specifying design specifications of the first optical propagation line unit; and

based on the design specification, calculating a quasi-periodic stationary pulse of which a waveform of an input optical pulse to the first optical propagation line unit is similar to a waveform of an output pulse from the first optical propagation line unit.

Claim 2 (Original): The method of claim 1, wherein a second or a second and later optical propagation line units are subsequently concatenated to the first optical propagation line unit.

Claim 3 (Original): The method of claim 2, further comprising:

specifying design specifications of the second or the second and later optical propagation line units.

Claim 4 (Original): The method of any one of claims 1 to 3, wherein the design specifications include at least a nonlinear coefficient, a dispersion value and a length in a light propagation direction of each of the nonlinear medium and the dispersion medium of each of the optical propagation line units and a power peak of the input optical pulse.

Claim 5 (Original): The method of claim 4, wherein provided that generalized dispersion values of the nonlinear medium and the dispersion medium included in the first

optical propagation line unit are s_1 and s_2 , respectively, and normalized lengths of the nonlinear medium and the dispersion medium are K_1 and L_1 , respectively, s_2 is a value of anomalous dispersion and satisfies a following equation and the values of K_1 and L_1 satisfy a following equation.

$$0 \leq |s_1| \ll 1 \ll s_2$$

$$L_1 \ll K_1$$

in which $|s_1|$ is an absolute value of s_1 .

Claim 6 (Original): The method of claim 5, wherein provided that generalized dispersion values of the nonlinear medium and the dispersion medium included in the n th optical propagation line unit (n is a positive integer equal to or more than 2) counting from the optical propagation line unit among the optical propagation line units are s_{1n} and s_{2n} , respectively, and normalized lengths of the nonlinear medium and the dispersion medium are K_n and L_n , respectively, s_{2n} is a value of anomalous dispersion and satisfies a following equation and the values of K_n and L_n satisfy following equations.

$$s_{1n} = s_1/\alpha^{n-1}$$

$$s_{2n} = s_2/\alpha^{n-1}$$

$$K_n = K_1/\alpha^{n-1}$$

$$L_n = L_1/\alpha^{n-1}$$

α : a compression ratio

Claim 7 (Original): The method of claim 5, wherein provided that generalized dispersion values of the nonlinear medium and the dispersion medium included in the n th optical propagation line unit (n is a positive integer equal to or more than 2) counting from the optical propagation line unit among the optical propagation line units are s_{1n} and s_{2n} ,

respectively, and normalized lengths of the nonlinear medium and the dispersion medium are K_n and L_n , respectively, s_{2n} is a value of anomalous dispersion and satisfies a following equation and the values of K_n and L_n satisfy following equations.

$$s_{1n} = s_1/\alpha^{n-1}$$

$$s_{2n} = s_2$$

$$K_n = K_1/\alpha^{n-1}$$

$$L_n = L_1\alpha^{2(n-1)}$$

α : a compression ratio

Claim 8 (Currently Amended): The method of ~~any one of claims 1 to 7~~ claim 1, wherein the input optical pulse is an optical pulse having a waveform close to a waveform of the quasi-periodic stationary pulse.

Claim 9 (Currently Amended): The method of ~~any one of claims 1 to 8~~ claim 1, wherein provided that the nonlinear coefficient and a loss coefficient of the nonlinear medium are ν and δ , respectively, the nonlinear medium is a highly nonlinear medium with the values of ν and δ satisfying a following equation.

$$z = - (1/2\delta) \ln(1 - 2\delta/a_0^2\nu) \zeta \quad z = - (1/2\delta) \ln(1 - 2\delta/a_0^2\nu) \zeta$$

z : a total length in the light propagation direction of the nonlinear medium in the optical pulse shaper, expressed by a real distance

ζ : a total length in the light propagation direction of the nonlinear medium in the optical pulse shaper, expressed by a normalized distance of dimensionless amount

a_0 : a power attenuation coefficient of an input end of an optical pulse of the nonlinear medium

\ln : logarithm natural

Claim 10 (Currently Amended): The method of ~~any one of claims 1 to 9~~ claim 1, wherein the nonlinear medium is a highly nonlinear optical fiber and the dispersion medium is a single mode optical fiber.

Claim 11 (Currently Amended): An optical pulse shaper designed based on the method of ~~any one of claims 1 to 10~~ claim 1.

Claim 12 (Original): The optical pulse shaper of claim 11, wherein a nonlinear phase shift amount of a pulse generated per step is $O(1)$.

Claim 13 (Original): The optical pulse shaper of claim 11, wherein the length of the nonlinear medium is set in consideration of a propagation loss of the nonlinear medium and the dispersion medium and a connection loss including a connection loss of different media.

Claim 14 (Original): The optical pulse shaper of claim 11, wherein an optical amplifier is inserted at a given portion so as to compensate power loss due to a propagation loss of the nonlinear medium and the dispersion medium and a connection loss including a connection loss of different media.

Claim 15 (Original): The optical pulse shaper of claim 11, wherein a pulse light source, an optical amplifier and a band pass filter are sequentially concatenated to reduce a noise in input light.

Claim 16 (Original): The optical pulse shaper of claim 11, wherein two members each having a DFB laser diode, an optical amplifier and a band pass filter sequentially concatenated are used to generate beat light and the beat light is input the optical pulse shaper.

Claim 17 (Original): The optical pulse shaper of claim 11, wherein a polarization-maintaining fiber is used.

Claim 18 (Currently Amended): The optical pulse shaper of ~~any one of claims 11 to 17~~ claim 11, wherein used as the nonlinear medium is a photonic crystal fiber.

Claim 19 (Currently Amended): The optical pulse shaper of ~~any one of claims 11 to 17~~ claim 11, wherein used as the dispersion medium is a fiber Bragg grating.

Claim 20 (Currently Amended): The optical pulse shaper of ~~any one of claims 11 to 17~~ claim 11, wherein used as the dispersion medium is a high-order mode fiber.

Claim 21 (Currently Amended): A pulse outputting device comprising the optical pulse shaper of ~~any one of claims 11 to 20~~ claim 11.

Claim 22 (Currently Amended): A laser machining device comprising the optical pulse shaper of ~~any one of claims 11 to 20~~ claim 11.

Claim 23 (Currently Amended): A ~~measruement~~ measurement device comprising the optical pulse shaper of ~~any one of claims 11 to 20~~ claim 11.

Claim 24 (Currently Amended): An optical sampling oscilloscope comprising the optical pulse shaper of ~~any one of claims 11 to 20~~ claim 11.
